

Product Information

Experience, Integrity & Performance in CSSD

Clinipak aims to provide a 'one-stop-shop' for Sterilisation and Disinfection Units.

Clinipak have products for use in each stage of the decontamination cycle, most of them developed to overcome common difficulties and problems in this area. For example, Clinipak's Choice Dry Wraps were constructed to reduce the incidence of wet packs after sterilisation and Transportation Wraps designed as a result of reports of external damage to wrapped packs.

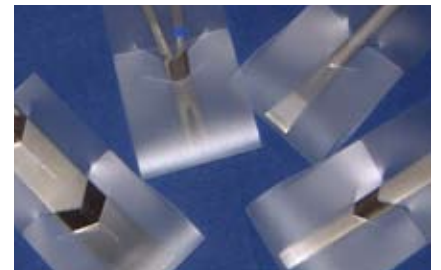

Clinipak Ltd is a medical manufacturing and distribution company. The product focus is Central Sterile Supplies and Theatre Sterile Supplies and the product range covers almost all items required within this area: for packing, protection, instrument presentation, colour coding and labelling, sterilisation control and cleaning and safe 'used instrument' circulation.

Transportation Boxes
Sturdy Transportation
