

SPEY KITS DOG AND CAT

The Spey Kit comprises, amongst other important instruments, the HIFA Spey Hook. This is a long, thin, probe-like instrument with a curved end and a buttoned tip, used to hook around the uterus of a companion animal and to bring it into the incision where an ovariohysterectomy can be performed. Used as a means of neutering a female by removing the ovaries. The common 'spey' operation in dogs and cats.
